

16<sup>th</sup> & 17<sup>th</sup> February 2018

A National Seminar on Role of Quantitative Techniques in Decision Science was organised by the institute during.

**Dr Asha Pachpande secretary ASM Group welcoming the guest Dr Prasad.**

In his keynote address on the occasion Dr. Lalit Prasad gave overview of Decision Science on all the topics. He explained how decision science is important in presenting statistical reports. He has explained all the topics of decision science such as what are transportation models, Transportation model terminology, developing an initial solution using three different methods.

**Dr G.B Patil welcoming the guest Dr Asita Gherewi during the seminar**

Dr. Asita Ghewari stressed on practical applications and its concept. Queuing theory is also known as waiting lines. It is extremely useful in predicting and evaluating system performance. Queuing theory can be applied to a wide variety of operational situation where imperfect matching between the customer & service facilities is caused by one's inability to predict accurate the arrival & service times of customers.
